

Python Data Structures

A dark blue diagonal gradient bar that starts from the bottom left corner and extends towards the top right corner, covering the lower half of the slide.

Python offers few built in data structures which include:

- List
- Tuples
- Sets
- Dictionary
- Strings
- Array (Numpy)

List

A collection that is ordered and mutable.

Syntax: `my_list = [1, 2, 3, 'hello']`

Tuples

- Similar to lists but immutable.
- Syntax: `my_tuple = (1, 2, 3, 'hello')`

Dictionary

- A collection of key-value pairs.
- Syntax: `my_dict = {'name': 'John', 'age': 30}`

Sets

- An unordered collection of unique items.
- Syntax: `my_set = {1, 2, 3}`
